

OpenCode All Skills Cheat Sheet

Total: 54 skills | Updated: July 2026

Development Process

Skill	Type	Description
test-driven-development	Auto	Drive dev with tests — implement logic, fix bugs, prove code works
spec-driven-development	Auto	Create specs before coding for new features or significant changes
source-driven-development	Auto	Ground decisions in official docs — authoritative, source-cited code
doubt-driven-development	Auto	Adversarial review of every non-trivial decision before it stands
code-review-and-quality	Auto	Multi-axis code review before merging
code-simplification	Auto	Refactor for clarity without changing behavior
coding-standards	Auto	Cross-project conventions for naming, readability, immutability
incremental-implementation	Auto	Deliver changes incrementally — land big work in small steps
planning-and-task-breakdown	Auto	Break specs into ordered, implementable tasks
debugging-and-error-recovery	Auto	Systematic root-cause debugging — tests fail, builds break
karpthy-guidelines	Auto	Reduce common LLM coding mistakes — surgical changes, verifiable criteria
ci-cd-and-automation	Auto	Setup/modify build pipelines, quality gates, test runners
deprecation-and-migration	Auto	Remove old systems, migrate users, sunset features
shipping-and-launch	Auto	Production launch checklists, monitoring, staged rollout, rollback

Architecture & Design

Skill	Type	Description
api-and-interface-design	Auto	Design stable APIs, REST/GraphQL endpoints, type contracts
backend-patterns	Auto	Node.js/Express/Next.js backend architecture, DB optimization
deployment-patterns	Auto	CI/CD, Docker, health checks, rollback, production readiness
docker-patterns	Auto	Docker Compose, container security, networking, volumes
documentation-and-adrs	Auto	Record decisions, ADRs, public API changes
frontend-design	Auto	Distinctive visual design — aesthetic direction, typography

frontend-ui-engineering	Auto	Production-quality UIs — components, layouts, state
design-reference	Auto	73 brand DESIGN.md files for matching brand aesthetics
ui-ux-pro-max	Auto	UI/UX design intelligence with searchable database
security-and-hardening	Auto	Harden against vulns — input handling, auth, data storage
performance-optimization	Auto	Optimize Core Web Vitals, load times, fix bottlenecks
observability-and-instrumentation	Auto	Add logging, metrics, tracing, alerting to production code

Codebase Understanding

Skill	Type	Description
understand	Auto	Analyze codebase → interactive knowledge graph
understand-chat	Auto	Ask questions about codebase using knowledge graph
understand-dashboard	Auto	Launch interactive web dashboard for knowledge graph
understand-diff	Auto	Analyze git diffs/PRs — what changed, affected components, risks
understand-domain	Auto	Extract business domain knowledge → domain flow graph
understand-explain	Auto	Deep-dive explanation of specific file, function, or module
understand-knowledge	Auto	Analyze Karpathy-pattern LLM wiki → knowledge graph
understand-onboard	Auto	Generate onboarding guide for new team members
using-agent-skills	Auto	Meta-skill — discover and invoke other skills

Research & Web

Skill	Type	Description
agent-reach	Auto	Internet research across 15 platforms — social, dev, career, video
browser-testing-with-devtools	Auto	Real browser testing via Chrome DevTools — DOM, console, network

Agent & Context Mastery

Skill	Type	Description
context-engineering	Auto	Optimize agent context setup, rules files, session start
gsd-core	Auto	Discuss→Plan→Execute→Verify→Ship phase loop
handoff	Manual	Compact session into handoff for fresh agent — context-limit escape

short	Manual	Force-compress last response — strip filler, simplify
interview-me	Auto	Extract user's true intent via one-at-a-time Q&A to 95% confidence
interview-style-doc-building	Auto	Build strategic docs via Q&A — patch file after each answer
idea-refine	Auto	Refine raw ideas → sharp concepts via divergent/convergent thinking
effective-agent-skills	Manual	Complete guide to writing agent skills — anatomy, patterns, testing
agent-eval	Auto	Head-to-head comparison of coding agents (Claude Code, Aider, Codex)
benchmark-methodology	Auto	Score competitors across 9 weighted dimensions
context-budget	Auto	Audit context window — identify bloat, prioritize savings
cost-aware-llm-pipeline	Auto	Model routing by complexity, budget tracking, retry, caching
cost-tracking	Auto	Track token usage, spending, budgets from ECC metrics

Specific Domains

Skill	Type	Description
caveman	Auto	Ultra-compressed communication — cuts tokens ~75%
cpp-coding-standards	Auto	C++ Core Guidelines — modern, safe, idiomatic C++
cpp-testing	Auto	GoogleTest/CTest — write, fix, diagnose failing C++ tests
continuous-learning-v2	Auto	Instinct-based learning — observes sessions, creates atomic instincts
autonomous-loops	Auto	Patterns for autonomous agent loops — pipeline to multi-agent DAG

From davidondrej/skills (Newly Added)

Skill	Type	Description
brain-to-docs	Auto	Extract project vision/decisions → README + ADRs via Q&A loop
copywriting	Auto	Writing style guide — authentic/formal, anti-AI-tells, concise
teach	Manual	Full interactive teaching — lessons (HTML), references, learning records
handoff	Manual	Compact session → structured handoff for context-limit recovery
short	Manual	Force last response to be simpler & shorter
effective-agent-skills	Manual	Guide to writing, testing, debugging agent skills

interview-style-doc-building	Auto	Build strategic docs one Q&A at a time
------------------------------	------	--

Legend

- **Auto** — Activates automatically when your request matches the description
- **Manual** — `disable-model-invocation: true` . Invoke by name or trigger phrase
- Skills live at: `~\.config\opencode\skills\`
